LAST PROJECTS

Employee Management System

Diciembre 2022

A application that helps companies manage employee information efficiently

- It automates human resources processes and provides features such as managing employee information, roles, salaries, work schedules, leave, assigned tasks, and monitoring their progress. The system also has a reporting module that enables managers to get an overview of the employees' situation and make informed decisions. Java and Spring Boot are the primary technologies used in the system's development, ensuring high performance, scalability, and reliability..

Form Users
